Color Management profiles

Find “Color Management” application:

Click “All profiles”:

Click “Add” and find folder with all profiles, select them and add them:

Go to Advanced settings:

My suggestion is “Chemical proof” profile....

Windows default profile, following Intel CFWA profile

Windows default profile, a bit edited is:

- Profile works well for using it with “Quantum Wall”

Different beings universal profile is:

The screenshot shows the Windows Color Management console with the 'Advanced' tab selected. The interface is divided into three main sections: 'Windows Color System Defaults', 'ICC Rendering Intent to WCS Gamut Mapping', and 'Display Calibration'. The 'Windows Color System Defaults' section contains two dropdown menus: 'Device profile' set to 'Chemical proof' and 'Viewing conditions profile' set to 'System default (WCS profile for sRGB viewing conditions)'. The 'ICC Rendering Intent to WCS Gamut Mapping' section contains five dropdown menus: 'Default rendering intent' set to 'Relative Colorimetric', 'Perceptual (photo images)' set to 'Proofing and line art', 'Relative Colorimetric (line art)' set to 'Proofing and line art', 'Absolute Colorimetric (simulate paper)' set to 'Proofing and line art', and 'Business Graphics (charts and graphs)' set to 'Proofing and line art'. The 'Display Calibration' section contains a 'Calibrate display' button with a color calibration icon, a checkbox for 'Use Windows display calibration' which is unchecked, and a 'Reload current calibrations' button. At the bottom of the console, there is a text box stating 'Color settings are stored separately for each user. To make changes for new users and shared printers, click Change system defaults.' and a 'Change system defaults...' button with a color calibration icon. A 'Close' button is located at the bottom right of the console window.

Color Management

Devices All Profiles **Advanced**

Windows Color System Defaults

Device profile: Chemical proof

Viewing conditions profile: System default (WCS profile for sRGB viewing conditions)

ICC Rendering Intent to WCS Gamut Mapping

Default rendering intent: Relative Colorimetric

Perceptual (photo images): Proofing and line art

Relative Colorimetric (line art): Proofing and line art

Absolute Colorimetric (simulate paper): Proofing and line art

Business Graphics (charts and graphs): Proofing and line art

Display Calibration

Calibrate display

☐ Use Windows display calibration

Reload current calibrations

Color settings are stored separately for each user. To make changes for new users and shared printers, click Change system defaults.

Change system defaults...

Close

A more human-like primitive profile is:

My back at the time personal following color management idea:

^

General

Scaling Mode ?

Set which device scales the content on your display.

GPU Scaling

Scaling Method ?

Adjust how content scales to your display.

Preserve Aspect Ratio

Variable Refresh Rate Mode ?

Sets the default refresh rate mode globally across all displays.

Not Supported
